

Description

Alfred 2.0 workflow to search and create notes in Evernote.

Search

Keywords

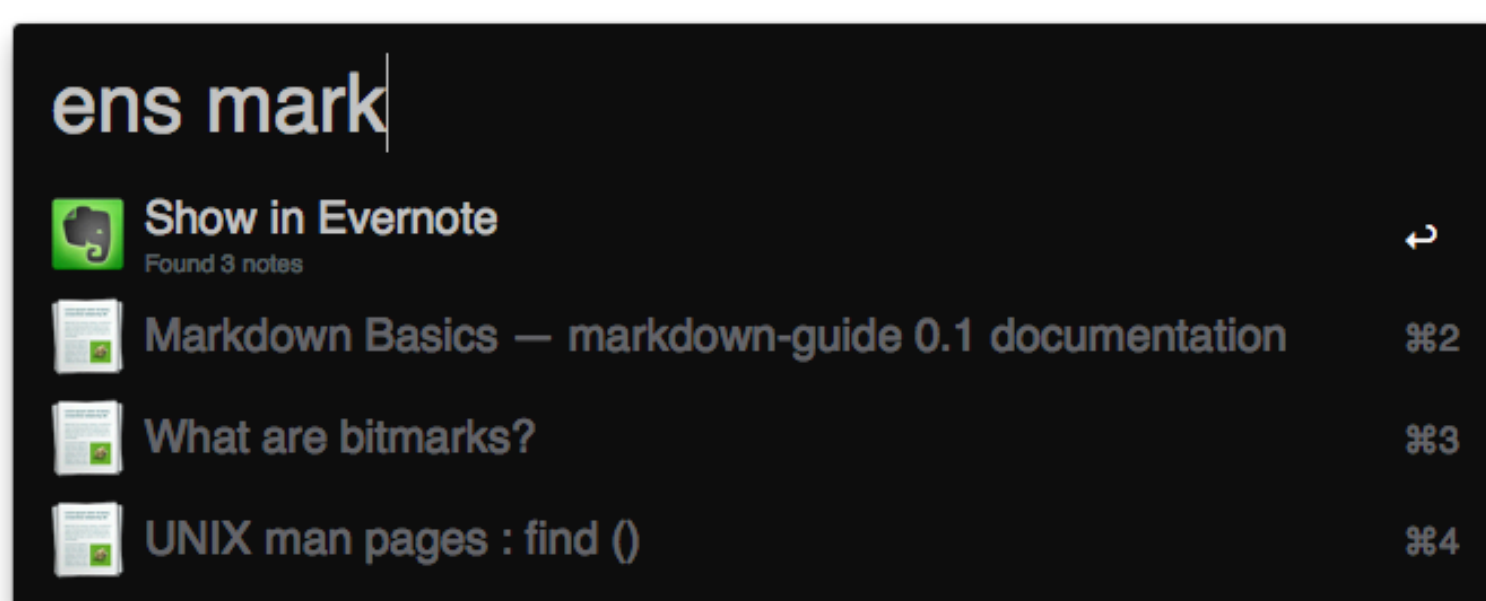

- **ens** to search in every note field
- **ens @** to search in a selected notebook
- **ens #** to search notes with a selected tags

You can use **ent** (search in titles only) or **enr** (search in reminders) or **entodo** (search to-do notes) or **enrec** (search notes updated within a week) or **enu** (search notes with a source URL) instead of **ens**.

NEW: You can select multiple tags to fine tune your searching. Just add a second hash sign and select or type the tag e.g. **ens #tag1 #tag2 :my query**

NEW: In addition, you can select a single notebook then tags too e.g. **ent @notebook #tag1 #tag2 :my query**

Note that, if you want to select a notebook and/or tags, the query goes after the colon sign as seen above.

Searching

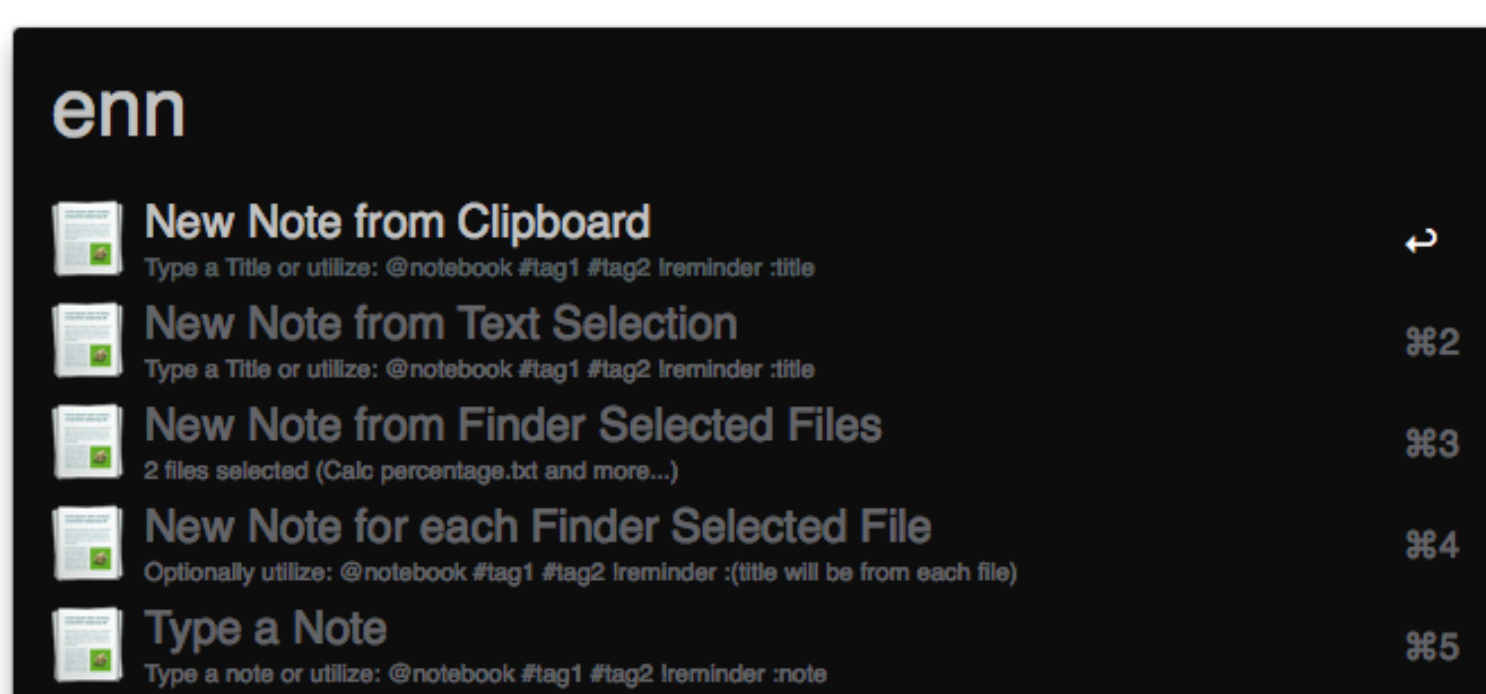

Actions

- **Return** key to open the note
- **Shift** key to preview the note
- **Option** key to set a reminder
- **Control** key to paste the note text content to the top most application
- **Function** key to open the note URL
- **Command** key to append text (from clipboard, selected text or typed) or selected file(s) in Finder. You can also use it to only add tags to a note. To do so, type or select a tag and don't type anything after the colon then select the source "Type a Note" in the next step e.g. **enn #tag :**

Note that Alfred Fallback Search is also supported (you have to add it in Alfred 2 Preferences>Features>Default Results, then click Setup fallback results button).

Create

Keyword enn

Create

You can **optionally** type the note title or, for a more complex creation, follow the syntax below:

@Notebook #tag1 #tag2 !reminder :Title

- @notebook: after typing @ a list of notebooks will be displayed then select one or type it; the default will be used if omitted
- #tags: after typing # a list of tags will be displayed then select one or type a new one (multiple tags are supported, type each one after a hash sign)
- !reminder: after typing an exclamation point a list of reminder suggestions will be displayed then select one or type a custom reminder such as **in 4 days** or **05/01/2014**
- Title: at the end, after a colon

Note that items of the syntax are optional, however the syntax has to end with a colon, with or without typing the note title e.g. **#tag1 :**

Note Content Source

- From clipboard
- From selected text
- Typed directly in Alfred (keyword **typenote** also available only for it)
- From Safari or Google Chrome URL
- From message(s) selected in Mail app
- From file(s) selected in Finder app: you can create one note with files or one note for each selected files. Alfred File Browser also supported.

Actions

- **Return** key: create a note
- **Control** Key: create a note and open it
- **Command** key: append text or file to a note
- **Option** key: append text to a note with current date

How to Append

1. Highlight one of the note content source e.g. From Clipboard
2. Optionally type tags and a reminder e.g. **#tag1 #tag2 !tomorrow**
3. hold **command** key and hit **return** key
4. select a note from the list (search by title only) and hit **return** key

Mail

- Message subject as the note title
- Message received date as the note creation date
- Message Link as the note source URL
- A short header (e.g. sender)
- A plain text version of the email content

Preferences

Bring Alfred and type the keyword **enpref**:

1. **Quick Look**: select Card (Evernote default) or HTML (entire note content)
2. **Search wildcard**: select Manual (type an asterisk after the query string) or Automatic (may be slower)

Download Evernote 8.0

- Release date: 20 Feb 2014
- Made in OS X 10.9.1
- Requires Evernote 5.5 from evernote.com
- [Download now](#)

What's new?

- New syntax to create a note: **@notebook #tag1 #tag2 !reminder :Title**
- Select tags and a notebook from a list or type them when searching or creating a new note
- Create one note for each Finder selected file
- Create a note from current Safari or Google Chrome URL
- Keyword **enu** to search notes with a source URL (default action is to open the URL instead of the note itself)
- Keyword **enr** to search and handle due/overdue reminders
- Keyword **entodo** to search to-do notes
- keyword **enrec** to search notes updated within a week
- Search with a selected notebook and multiple selected tags at the same time e.g. **ens @notebook #tag1 #tag2 :my query**
- Set a reminder (option key)
- Open note URL (function key)
- Append text or file(s) selected in Finder to a note from search feature (command key)
- Append file(s) from Finder
- Several improvements
- Bugs fixed
